Industrial Circular Economy Solutions

PAPER FEEDING

INDUSTRIAL CIRCULAR ECONOMY SOLUTIONS

Complete technology solutions and engineering, automation, and production services as a single partner.

Recycled cellulose fiber is an excellent material for thermal insulation and asphalt additives. It is an ecological and sustainable solution because it is made from recycled paper or cardboard. Makron offers you complete production technology to manufacture cellulose fiber insulation and additives from recycled raw material. We have developed these production lines in close collaboration with our long-term customers. The production lines run smoothly by Makron designed automation control system. Makron also works as a subcontracting partner of pulp technology providers and the waste-to-energy industry. We offer our expertise in engineering, manufacturing, and automation as a single partner to complete your processes and technology. We deliver conveyor solutions that are optimized for efficient material handling.

PAPER FEEDING

In the first step of cellulose insulation production the raw material, paper, is fed evenly onto the pre-handling table from where it is moved to the conveyor. On small capacity lines, the impurities are separated manually. On large capacity lines, the raw material has already been purified and baled, and the paper bales are fed onto the conveyor.

What Makron does

The Makron pre-handling table is designed for manual sorting of loose paper. For larger capacities, Makron delivers automated paper feeding systems for paper bales.
